ABOUT

An innately inquisitive architect in the making, passionate about processes of built and public space. With each project I set out to create more than just something aesthetically pleasing but a place that ties inseparably with its environment and serves as a social vehicle. I am also interested in relational thinking theory, urban sketching, and the combination of both in analysis of how human and non-human agents inhabit and make space, and how that changes over time.

SKILLS

- AutoCad
- Google Sketchup Pro
